

WOULD YOU LIKE A CAREER...

...that's focused on improving the health of plants, water and soils?

Bioscientist and Bioengineer Technicians at Spekcion™ work on understanding the performance of crops, water and soil. We help crop growers with growing healthier plants for food, medicine and materials. We find and fix plant stress before it does damage. We increase crop safety and productivity.

Job Outlook

Currently, the need to ensure safe and sustainable food, medicine and materials while reducing global warming has spurred the demand for bioscientific skills and businesses. Spekcion needs a diverse team with a wide range of skill sets. In addition to technicians, we also employ engineers, scientists, agronomists, and those with business skills in marketing and finance.

Education

Bioscientist and Bioengineer Technicians at Spekcion require an Associate's degree in science or engineering.

Expected Salary Range

\$40,000 - \$65,000 per year
