

# Process Engineer

At Croda, Process Engineers are a vital part of how we turn bio-based raw materials in to our innovative ingredients. You will apply your engineering knowledge to design and implement improvements to increase the efficiency and safety of our manufacturing process. You will be a project manager, responsible for collaborating with maintenance and engineering to ensure operations goals are being met. As a leader, you will help to advise, mentor, and train chemical plant operators and supervisors. To succeed, you will need to be a team-player with excellent project management skills.

## Recommended Courses

Chemistry, Physics, Engineering, Environmental Science, Math, Computer Science, Writing/Communications

## Skills Needed

- Expertise in technical and mathematical concepts
- Familiarity with a wide range of engineering disciplines
- Effective team player and relationship builder
- People and project management skills
- Excellent planning and problem solving skills
- Written and oral communication skills

## Education

B.S. in Chemical Engineering
