

Research and Technology Analyst

At Croda, Research and Technology Analysts are scientists, project managers, and communicators. You will play a key role in the development of innovative ingredients and technologies. In addition to designing and performing lab experiments, you'll present your work externally, at conferences and in scientific publications, as well as internally, to help deepen scientific understanding and drive business decision-making. To succeed, you will need to be someone who is proactive, collaborative, and an excellent communicator.
