

Explore the World with Your Students as a Science Teacher

What Science Teachers Do

Science Teachers impart a deeper understanding of the world in which we live. They support creative analysis and scientific reasoning, explore the universe, and seek answers to our questions through research and experiments. Teaching science is a rewarding career for people with an aptitude and passion for the subject. Science teachers are key in helping students find a love for science and learn vital lessons about how the world works.

Science Teacher Job Description

- Create lesson plans for students every day based on the national and local school standards and curriculum for science education.
- Create learning experiences that help enhance student learning.
- Understand different learning levels and styles that will engage diverse learners.
