

# Bloomenergy®

## WHO WE ARE

Bloom Energy makes clean, reliable energy affordable for all.

At Bloom, we look forward to a 100% zero-carbon future, and our fuel-flexible technology offers one of the most reliable electricity solutions for a world facing unacceptable levels of power disruptions.

Our resilient platform has kept electricity on for our customers through hurricanes, earthquakes, forest fires, extreme heat and grid failures. Unlike traditional combustion power generation, our platform is community-friendly and designed to create little-to-no harmful air pollutants.

## WHAT WE MAKE

At our Manufacturing Center in Newark, we use advanced manufacturing applications and principals to make our Energy Servers, which deliver clean, reliable, and affordable electric power.

Bloom's Energy Servers convert fuel — such as biogas, hydrogen, or natural gas — into electricity without combustion at significantly higher efficiencies than traditional, combustion-based resources. Our technology easily integrates into community environments thanks to its attractive design, compact space requirement, minimal noise profile, and lack of local air pollutants.

Our fuel cell technology can also be used to create hydrogen, which is widely recognized as a critically important tool in decarbonizing the energy economy

## COOL CUSTOMERS

## CAREER OPPORTUNITIES

Bloom Energy is thriving in Delaware, and we're looking to expand our world-class team, as our products are in high demand. Check out open roles in your area at:
